WORK EXPERIENCE

Secret Dimension Studios

Jan. 2026 - June. 2026

Software Engineer

Seattle, WA

- Prototyped a real-time .NET API using SignalR and claims-based authorization, paired with a Svelte + TypeScript frontend to support internal tooling.
- Provisioned and codified end-to-end AWS infrastructure with Terraform — a 12-node build farm, Perforce source control server, and GameLift-backed game server fleet — delivering a complete build-to-deploy pipeline for a small game studio.

Distinct Possibility Studios

Jan. 2024 - Jan. 2026

DevOps Engineer

Seattle, WA

- Architect and maintain CI/CD pipelines using Jenkins for an Unreal Engine 5 title supporting 150+ developers, reducing average build time from 3 hours to 30 minutes, and providing pre-commit workflows to ensure stability.
- Manage cloud build infrastructure within AWS, optimize cloud footprint for high performance and low costs. Right sized 20K per month budget for studio infrastructure including 20 EC2 build machines, S3 artifact and symbol stores, load balancers, WAF, and ECS.
- Orchestrated early access launch, establishing release strategy, managing multi-branch workflows, and coordinating releases with stakeholders across distribution channels.
- Own integration and ongoing maintenance of Grafana Cloud, Loki, and Prometheus providing observability for hundreds of game servers.

ProbablyMonsters

May 2022 - Oct. 2023

Build & Release Engineer

Bellevue, WA

- Established CI/CD infrastructure for incubation studios by deploying and configuring Perforce and Jenkins instances, onboarding new teams to automated build pipelines and accelerating time-to-production.
- Served as primary escalation point for critical build system issues across multiple AAA titles and 400+ devs, diagnosing and resolving complex pipeline failures in Perforce, Jenkins, and Unreal Engine build systems to maintain development momentum.
- Led development on a .NET pre-commit validation tool adopted as standard workflow across multiple AAA game development teams, enabling developers to catch integration issues before submission and significantly reducing build breaks for 100+ developers.
- Engineered Python-based ChatOps application integrating Slack with Jenkins, enabling teams to trigger builds and query artifact statuses via chat commands, reducing deployment friction and improving developer productivity.

BenefitHub

Jan 2022 - April. 2022

Full-Stack Developer III

Tampa, FL

- Built React frontend features for an insurance quote system, implementing responsive user workflows that supported real-time quote generation for customers.
- Developed and maintained .NET REST APIs powering the quote engine, integrating frontend and backend workflows to deliver end-to-end functionality in a customer facing insurance product.

Publix Super Markets

Sep 2016 - Dec 2021

Software Engineer | August 2020 - December 2021

Lakeland, FL

- Developed full-stack inventory management solutions deployed across 1,200+ retail locations, building frontend (JavaScript, ASP.NET), mobile (Xamarin), and backend (.NET, SQL) applications that streamlined and modernized store operations enterprise-wide.
- Engineered CI/CD pipelines using Azure DevOps to automate deployment of latest changes from main branch to production web servers, reducing manual deployment overhead and accelerating release cycles.
- Built real-time inventory monitoring dashboard using Blazor, enabling support teams to query and diagnose inventory errors across all 1,200+ store locations from centralized interface.

Software Quality Assurance Analyst | September 2019 - August 2020

Lakeland, FL

- Developed automated test suites using Selenium and Appium for C# applications, reducing manual testing effort and improving regression test coverage across web and mobile inventory platforms.
- Built API integration test framework with NUnit, validating endpoint functionality and data integrity to ensure reliable backend services for 1,200+ retail locations.

Tech Support Analyst | October 2016 - September 2019

Lakeland, FL

- Perform first level problem determination/support for store hardware and software application problems.
- Develop and test PowerShell scripts to automate problem determination and resolution.

EDUCATION

Polk State College

2017 - 2019

Bachelor of Applied Science, Business Information Technology

Lakeland, FL

TECHNICAL SKILLS

- **Build & CI/CD:** Docker, Jenkins, Azure DevOps, Terraform, HashiCorp Nomad, Unreal Horde
- **Cloud & Infrastructure:** AWS (EC2, S3, ECS, WAF, Load Balancers, GameLift), HashiCorp Vault, Grafana Cloud, Prometheus, Loki
- **Frameworks:** ASP.NET, .NET, React, Blazor, Svelte, Xamarin, Entity Framework, SignalR
- **Programming Languages:** C#, TypeScript, JavaScript, Python, SQL, PowerShell, Groovy, C++
- **Tools & Platforms:** Git, Perforce, Unreal Engine 5, Godot, Selenium, Appium, NUnit
